

LIDAR DRONE SOLUTIONS

About Surveyaan V1 Pro

Surveyaan LiDAR products are fully integrated systems designed for commercial UAV applications. Our LiDAR solutions include a laser scanner, IMU, GPS and embedded computer.

Surveyaan® is a proud brand of Nibrus Technologies Private Limited, established in 2020 after nearly two years of research and development. Nibrus is an Indian Institute of Management (IIM) Kozhikode–incubated startup, supported and funded by Oil and Natural Gas Corporation (ONGC).

Since October 2020, we have launched two products, Surveyaan and Surveyaan GeoWorkspace, and received tremendous market response. In just one year, over 150 customers have achieved 10x growth using our solutions.

Beyond our products, our services and after-sales support play a key role in helping small and medium businesses adopt this new-age technology—our growing customer base stands as a true testament to that.

Surveyaan V1 Pro Aircraft

LiDAR Applications

There is a Surveyaan solution for each of your projects

Surveyaan Systems suited for:

- ▶ Under vegetation
- ▶ Hard-to-access zone (by foot or airplane)
- ▶ Data needed in near real-time, frequently, or regularly
- ▶ Accuracy range < 10cm Hz | < 5 cm V

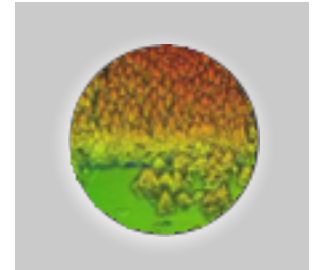

LiDAR technology has proven its efficiency in providing precise aerial surveying. With laser sensors that can be mounted on UAV's and other light aircraft, we can now generate 3D mapping data. The technical applications are steadily increasing and diverse.

Products

Overview

Surveyaah is the light weight stand-alone surveying solution for drones and other ultra-light aircraft. Our drone product line is light-weight, fully-integrated. We designed each system to meet 3D mapping high precision and accuracy needs.

Surveyaah V1 Pro Aircraft with Hard Joystick Controller

Safety Features:

- Unidirectional Radar based obstacle detection in front
- Dual Compass & GPS for reliable positioning data
- Optics-based positioning support in case of GPS failure.
- First Person View (FPV) video transmission to get real-time feed of the environment
- Auto Return to home on low battery
- Auto Return to home on high wind condition
- Auto Return to home on communication loss
- Auto Return to home on high interference

Sr. No.	Particulars	Description
1	Type	Multi Rotor
2	Flight Time	40-45 Min with 1Kg of Payload
3	Max Payload	6Kg, Capable of carrying bulky high-end geophysical payloads

SURVEYAAN

LiDAR PAYLOAD

Entry level UAV
LiDAR solution

Technical specifications

Weight:	950 Gm
Data Storage:	256 GB
Field of View:	70 ° Hz 4.5 ° Hz
Max Return:	3
Scan Rate:	2.4L pts/s [First Return] 4.8L pts/s [Second Return] 7.2L pts/s [Third Return]

Position & Orientation

GNSS:	Triple Frequency GNSS with sampling rate of 5Hz
IMU Frequency	500 Hz

Imaging System:

Resolution:	6252 x 4168
Effective Pixels:	26MP, 30fps

Technologies inside

- ▶ Integrated Livox Avia LiDAR scanner
- ▶ Built-in 26 MP calibrated camera

UAV Integration

- ▶ Real time UAV tracking
- ▶ Sensors calibration support

Key differentiators

- ▶ Industrial-grade accuracy
- ▶ Lightweight (0.95 kg)
- ▶ Budget Friendly

Options

- ▶ Mounting bracket
- ▶ Warranty and technical support extensions
